

- Q1. Construct a DFA, which accept **Odd number of 0's and even number of 1's**
- Q2. Design a FA which accept $(a|b)^*ab(a|b)^*$
- Q3. What are the closure properties of Regular Language? What is the use of pumping lemma.
- Q4. Convert NFA to DFA

- Q5. Define Chomsky Hierarchy of Language.
- Q6. What is the language accepted by PDA. Explain with an example of it.

- Q7. Write Arden's Theorem. Construct a Regular expression of this Finite Automaton.

- Q8. Minimize the DFA

Q9. Convert epsilon NFA to NFA

Q10. What is the closure properties of CFL? Explain it.

Q11. Write the Church Turing Hypothesis.

Q12. Prove the TM Halting Problem is Undecidable.

Q13. Find whether the lists

$M = (abb, aa, aaa)$ and $N = (bba, aaa, aa)$ have a Post Correspondence Solution?

Q14. Design a Push-down Automata which accept $a^n b^n$.

Q15. What is Goodel Number. Find out the Goodel number of the the Gödel number for the symbol "0" is 6 and the Gödel number for the symbol "=" is 5. Thus, in their system, the Gödel number of the formula "0 = 0" is

16. Explain CYK Algorith.

Given a grammar G with productions:

$S \rightarrow AB \mid BC \quad A \rightarrow BA \mid a$

$B \rightarrow CC \mid b \quad C \rightarrow AB \mid a$

Test $w = baaba$ is generated by G .

Q17 Construct a Turing Machine for language $L = \{0^n 1^n 2^n \mid n \geq 1\}$

Q18. Define Mealy and Moore Machine.

Q19. Show that the following Grammar is Ambiguous.

Set of alphabets $\Sigma = \{0, \dots, 9, +, *, (,)\}$

$E \rightarrow I$

$E \rightarrow E + E$

$E \rightarrow E * E$

$E \rightarrow (E)$

$I \rightarrow \varepsilon \mid 0 \mid 1 \mid \dots \mid 9$

Q20. Solve by using Ackerman's Function $A(4,3)$.

Q21. Convert the CFG to CNF

$S \rightarrow ASB \quad A \rightarrow aAS \mid a \mid \varepsilon \quad B \rightarrow SbS \mid A \mid bb$

Q22. Convert the CFG to GNF

$S \rightarrow XB \mid AA$

$A \rightarrow a \mid SA$

$B \rightarrow b$

$X \rightarrow a$
